

COLLECTION POINT OLIVIA[®]500

CONTAINER FOR SEPARATELY COLLECTED WASTE MINERAL

Olivia 500 island

Cod. 02501/M

OLIVIA[®] is made of two containers placed one inside the other. The outer container (Upper diameter 125 cm. Lower diameter 105 cm. Height about 135 cm.) has a capacity of 800 litres and works as a hold-up tank, it is made of PEHD ideal to resist against the aggression of atmospheric agents and oils and it is moulded with a rotational system increasing its shock-resistance (because this moulding technique is weld-free).

To IMPROVE its SAFETY it is equipped with ROLL BARS and/or POLES and it is FIXED to the ground thanks to some specific PLATES (PLATES excluded) to avoid SHOCKS and/or ACCIDENTAL OVERTURNS due also to strong weather events. It is easy to INSPECT, WASHABLE and RECLAIMABLE because it has an upper cover (125 cm. diameter) equipped with a SNAP LAVER and a LOCK with CODED KEY.

The inner container, made of PEHD moulded through a rotational system, has a capacity of 500 litres and it is equipped of a large FILLING NECK with a screw cap for oil collection.

It has a float-type GAUGE with external analogical display, like a manometer, a manually opened cover with automatic closure with air breather and anti-odour carbon filter (lasting about 2 years) which keeps stray animals away, a blocking device, a FUNNEL to facilitate the pouring of the oil and an anti-leakage SAFETY VALVE for accidental overturning or overfilling.

Available in the Olivia island version:

Version without Roll Bar and/or poles for ground fixation.

Optional accessories:

- Customized stickers,
- plates for ground fixation,
- KIT SI for controlled opening.
